

## Anthony Levesque

Two years ago I started a new career path. I previously had a passion for electronic devices and figured I might as well try to learn more about it by pursuing the field of programming.

My educational journey led me where I delved into programming and honed my skills in software development. This program was instrumental in paving my way toward becoming a software developer. In my 2nd year, I took on a part-time job, which eventually opened doors to an internship. I further solidified my experience with a work practicum, and then secured a role as a developer with the same company.

After taking a hiatus post-graduation, I embarked on a journey of travel before returning to kickstart my new career with the company and continue my ever growing passion of programming.

## Work Experience

- September 2023 - Present

Vidcruiter Inc.

### Software Developer

- Implemented new features i.e Autocomplete, Truncating Text, and Routing requested by users.
- Fixed recurring bugs, improving user experience.
- Enhanced legacy code through refactoring and discovered more efficient, optimized techniques.
- Reworked front-end design & implemented new components for re-usability.

- January - December 2023

Vidcruiter Inc.

### Client Support

- Keep up to date with new changes in the software to provide adequate solutions to users.
- Resolve technical issues or complaints via email or chat software.
- Respond to users in a friendly and timely manner.
- Information gathering to resolve issues.

## Projects

### HR Management System - Capstone Project (C#)

The project, comprising desktop, mobile, and web components, was executed within a three-week timeframe. It included an API system for web and mobile interactions, allowing management staff to create and modify departments and employees, including job details and other relevant information.

### Twitter/X Clone - Web App (PHP)

Created a web app where new users have the ability to sign up, comment on posts made by others, and, once logged in, retweet these posts.

### Restaurant Table Reservation System - Web App (Java)

Developed a web app using Java where users can add a new reservation, which is then reviewed and approved by the management staff. Upon approval, email notifications containing the reservation details are sent to the user.
